Intracorp Health Launches with Growth Equity Investment from HEP

Intracorp Solutions (founders of MobileMD) and Blueprint Healthcare IT combine to offer healthcare community engagement technologies, health information security and compliance services to healthcare organizations and their business partners.

Yardley, PA – BluePrint Healthcare IT and Intracorp Solution's healthcare practice have teamed with Health Enterprise Partners (HEP) to launch **Intracorp Health™**. The new company will bring Intracorp's experienced team of digital health strategists and software engineers together with BluePrint's health information security and **HITRUST Certified Assessor** teams, as well as its award-winning Care Navigator™ care coordination and patient engagement experts. Intracorp Health will offer a comprehensive suite of information security and compliance services and technologies, as well as a multi-channel healthcare community engagement platform.

"Our experience engineering, securing, and supporting innovative software solutions for healthcare is the perfect complement to BluePrint's healthcare information security and compliance expertise, as well as its Care Navigator™ engagement and care coordination platform. Together, as Intracorp Health, we will provide **critical value** to the healthcare industry – **information security and compliance support services**, as well as a robust, multi-channel, data-driven patient engagement platform **with tailored privacy and security features woven throughout**," said Todd J. Fisher, CEO of Intracorp Health.

According to Vikas Khosla, President and CEO of BluePrint Healthcare IT, "BluePrint's commitment to health data security, enhanced patient privacy, and support for regulatory compliance offers an environment in which data exchange, care coordination and patient engagement can thrive. We're excited to bring our shared values and passion to the marketplace, and help our clients improve care experience in the communities they serve."

HEP will provide growth capital and on-going strategic collaboration to enable rapid expansion of both the software and services business lines. "We had a terrific experience working together nine years ago with Todd Fisher and his team when we participated in the creation and growth of MobileMD, Inc. prior to the company's sale to Siemens (Cerner) in 2011. With the addition of Vikas to this deep management team, led by Todd as Chairman and CEO, we see an incredible market opportunity to become the clear leader in the healthcare security space as well as a leader in patient engagement," said Dave Tamburri, managing partner of HEP.
